

A strategic and efficient approach to planning and building telecom networks

Telecom networks are complex and costly to build and manage, and yet, communications service providers (CSPs) must meet the rising bandwidth, security, and performance customers demand. But balancing timeline expectations and budget realities for network enhancements are challenging when faced with:

High costs for dense 5G and fiber networks

Complex and location-specific approval processes

Unclear ROI or priority use cases

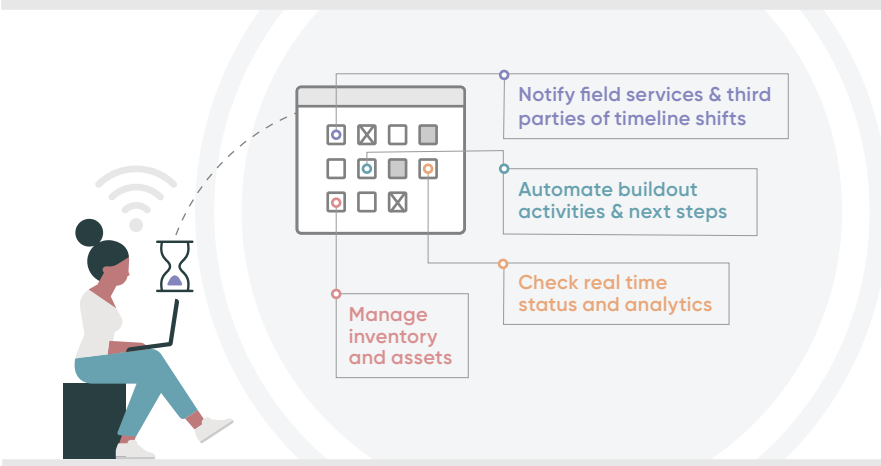

Rising competition in priority markets

Disparate assets, systems, and teams

THE ANSWER?
Reinvent the foundation of your business with ROI, speed, and visibility in mind.

Design your network buildouts to drive a strong ROI
Make and capitalize on smart network infrastructure investments by building a compelling business case focused on maximum coverage and bandwidth.

Accelerate the buildout process for faster time to market
Speed up the deployment process with a proven approach to avoid common bottlenecks and navigate network complexities with ease.

Deliver end-to-end visibility for a single source of truth
Unite and manage all assets, systems, and risks across office, field, and third-party teams through a single, centralized platform.

SERVICENOW & ACCENTURE Network Plan and Build

Current networks just can't keep up. It's time to digitize the network planning and buildout process.

With the right strategy and deployment approach—united on a centralized platform and powered by automation and AI—ServiceNow and Accenture help CSPs transform networks into a strategic enabler of higher-margin business models. Together, we take the unknowns out of the process to keep you on time, on budget, and on the path to realizing new revenue streams.
